

With Tecnometal **SEMI-FLEX** PCB flex static applications **"LOW COST"**

SEMI-FLEX represent an excellent **"LOW COST"** alternative to the traditional and more expensive PCB rigid-flex.

Indispensable in many Static Flexible applications or with limited number of movements (*bendings*).

ADVANTAGES:

- Quality, reliability and stability in the connections without connectors and cables
- Ideal for large PCBs or multiple PCBs to connect in a limited space
- Low cost PCB material and production process
- Possibility to produce any type of PCB (1-2L - ML)
- Conventional assembly (as FR-4 std)
- High TG

APPLICATIONS:

For all projects requiring flexibility, reliability and stability in the connections, no connectors, no cabling costs and a small footprint, such as automotive, lighting, measuring instruments, process control and machine movements.

FEATURES:

- Variable thicknesses (1L - 2L - ML)
- Lead-free compatible
- Base material made in Europe
- *PCB made in Italy*
- UL certified
- Available in a wide range of materials
